The Short Season Forage Blend

Have unseeded acres due to excess moisture? Consider a blend of cool & warm season plants to sow as a short-season summer forage option. Grow high-quality biomass in **50-60 days** on these acres. Regrowth.

Agronomic Tip: We recommend sowing this blend from early June to mid-July (no later than July 15th) as the warm season species cannot tolerate frost.

FORAGE PEAS COOL SEASON LEGUME 22.5%	ITALIAN RYE GRASS COOL SEASON GRASS 10%	BERSEEM CLOVER COOL SEASON LEGUME 2.5%	GERMAN MILLET WARM SEASON GRASS 14%
